2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Regarding claim 1, Matsuura discloses an image processing apparatus for receiving and processing a plurality of image signals, comprising: band segmentation means for segmenting an image signal into different frequency band components (see abstract where the prior art discloses a plurality of frequency components are obtained from block of data); and image composition means for, after said band segmentation means segments a plurality of image signals, compositing the plurality of image signals by replacing some or all image data in common frequency band components among the plurality of image signals, and outputting one image-signal (see claim 1 of the prior art, abstract and paragraphs 0147, 0182-0183).

Regarding claim 2, Matsuura discloses an image processing apparatus for receiving and processing a plurality of image signals, comprising: image composition means for receiving a plurality of image signals, which have been segmented into frequency band components, and compositing the plurality of image signals by replacing some or all image data in a predetermined frequency band component among the plurality of image signals (see claim 1 of the prior art, abstract and paragraphs 0147, 0182-0183); and image output means for outputting the images composited by said image composition means as a moving image upon changing the predetermined frequency band component processed by said image composition means along with an elapse of time (see paragraphs 0147, 0229, 0250, 0267 where the prior art discloses the encoded data is outputted from 204a-204c)

Claims 3 and 5 are rejected for the same reason as discussed in claim 1 above.
